SCHLEIFENBAUER - LIVING FOR THE POWER TO DELIVER

SCHLEIFENBAUER PRODUCTS BV • www.schleifenbauer.eu • info@schleifenbauer.eu

ABOUT INEXIO

Inexio delivers high quality glass-fibre Internet services to mainly commercial customers. They have built their own fibre network that is currently more than 5.000 km long. Because of rising customer demands they have built 6 data centres for hosting their own and their customer's services.

THE CHALLENGE

Inexio wanted to have full insight into the power consumption of all of their data centres. Not only for internal use but also for their customers. That is why back in 2010 Inexio chose Schleifenbauer as their partner. The challenge was to be able to remotely monitor all power consumption data and make all of this data available to their own back-end systems.

By using Schleifenbauer products this challenge has been met with great success. Every 15 minutes the data from more than 3.000 power sockets, spread over 6 data centres, is monitored and loaded into the CRM and billing systems. This gives Inexio and their customers around the clock insight in their power consumption. Because of this things like climate control can be optimised, enabling Inexio to reach maximum efficiency in power usage.

FLEXIBILITY

Inexio wanted a partner that can provide flexible solutions that are freely configurable. No standard of the shelf products, but actual solutions tailored to the needs Inexio has. On top of that, high quality products and speedy delivery was of major importance. As a partner, Schleifenbauer has proven to be all people has been a real pleasure.

“We can highly recommend Schleifenbauer as a partner, and have done so already on multiple occasions. They deliver high quality at a fair price and can deliver fast. Working with Schleifenbauer has been very enjoyable!”

- Christian Würth, Inexio
